

DAB Radio and Antenna Quick Guide

1. Connect the gold connector to the TV Out port on the back of the VXMMI/GTMMI unit.
2. We recommend the DAB Antenna to be installed at the edge of the windscreen by the passenger side door panel. The black wire needs to be connected to a 12 volt ignition source.

3. Once the unit is fully installed, go to the DAB menu via the touch screen, your station list will most likely be empty. So you need to press seek to tune in the stations, this can take up to 60 seconds.

4. Once tuned in, the stations will show in a list on the left-hand side of the screen, with the station information on the right-hand side.
